

AMI Day 6: Geometry

1

What is the scale factor for the triangles below?

- A $\frac{3}{2}$ B $\frac{4}{3}$ C $\frac{3}{5}$
 D $\frac{2}{3}$ E $\frac{5}{4}$

5

Find the measure of $\angle ABD$.

2

Find the cosine of $\angle B$.

- A 1.7321
 B 0.8660
 C 2
 D 1.1547
 E 0.5774

6

Which is the approximate measure of acute $\angle A$ when $\tan A = 0.698$?

- A 44.3° B 12.2° C 34.9°
 D 45.7° E 35.2°

3

Which of the following is *not* an isometry?

- E None of these

7

Which equations below are true about $\triangle ABC$?

- I. $a = \sqrt{c^2 - b^2}$
 II. $c = \sqrt{a^2 + b^2}$
 III. $b = c - a$

- A I B II C III
 D I and II E all of these

4

How many lines of symmetry does the polygon have?

8

The translation "5 units to the left and 3 units up" in coordinate notation would be $__?$.

- A $(x, y) \rightarrow (x + 5, y + 3)$
 B $(x, y) \rightarrow (x + 5, y - 3)$
 C $(x, y) \rightarrow (x - 5, y + 3)$
 D $(x, y) \rightarrow (x + 3, y - 5)$
 E $(x, y) \rightarrow (x - 3, y + 5)$

9

Find the value of y . Round to the nearest hundredth, if necessary.

13

In the diagram, $\frac{AB}{BD} = \frac{AC}{CE}$.

Find the length of \overline{AE} .

- (A) 7.5
- (B) 15
- (C) 17.5
- (D) $13\frac{1}{3}$
- (E) $28\frac{1}{3}$

10

Find the scale factor of $MNOP$ to $QRST$, given that $MNOP \sim QRST$.

- (A) 1:5
- (B) 3:5
- (C) 2:5
- (D) 5:2
- (E) 5:3

14

Solve for x

11

What value of a would make lines x and y parallel?

15

Use the triangle below. Choose the correct ratio to find $\tan B$.

- (A) $\frac{b}{a}$
- (B) $\frac{a}{b}$
- (C) $\frac{a}{c}$
- (D) $\frac{c}{a}$
- (E) $\frac{b}{c}$

12

Find the value of y .

16

Find the area of the figure. Round to the nearest hundredth, if necessary.

- (A) 79.37 m^2
- (B) 53.61 m^2
- (C) 75 m^2
- (D) 57.0 m^2
- (E) 40.74 m^2

AMI Day 7: Geometry

17

Find the value of x that makes the triangle a right triangle.

19

find the measure of \overline{XY} .

18

Points $A(-3, 2)$ and $B(-6, -8)$ are the initial and terminal points of vector \overrightarrow{BA} . What is its magnitude?

- A (3, 10)
 B $\langle -9, -6 \rangle$
 C 10.4
 D 10.6
 E 10.8

20

Find the measure of $\angle 1$.

- 16 The table below shows the sum of the interior angle measures of certain polygons. According to the information in the table, which is the best prediction of the sum of the interior angle measures in an 11-gon?

Number of Sides	Sum of Interior Angle Measures
3	180°
4	360°
5	540°
6	720°

- 24 For the circle below, which expression can be used to find the area of the shaded region?

- F $\frac{1}{3} \cdot 16\pi$ G $\frac{2}{3} \cdot 16\pi$ H $\frac{1}{3} \cdot 64\pi$ J $\frac{2}{3} \cdot 64\pi$

- 25 The volume of a cone is given by the formula $V = \frac{1}{3}\pi r^2 h$. What is the volume of the cone below, to the nearest whole number? Use 3.14 for π .

- 26 The radius of the circle below is 5 centimeters. Line segment AB is a diameter of the circle. What is the value of x to the nearest tenth?

AMI Day 8: Geometry

- 28 A triangle undergoes an enlargement as shown in the diagram below. What is x ?

- 19 Which shows a net for the figure shown below?

A

C

B

D

- 21 A sword fish can swim at a rate of 60 miles per hour. About how many meters per hour is this?

A 97m

C 9660m

B 966m

D 96600m

- 18 A plane intersects a right cylinder parallel to one of the cylinder's bases. What is the shape of the intersection?

F circle

G rectangle

H ellipse

J trapezoid

20 Which figure has the views shown?

29 For the right triangle shown below, what is the tangent of $\angle A$?

- A $\tan A = \frac{3}{4}$ B $\tan A = \frac{4}{5}$
 C $\tan A = \frac{5}{4}$ D $\tan A = \frac{4}{3}$

17 Eleanor has a garden in the shape of a right isosceles triangle. Two sides of the triangle measure 10 feet long each. What is the length of the third side?

27 Based on the information in the diagram, which triangle congruence property can be used to justify that $\triangle ABC \cong \triangle FGH$?

- A SSS (If three sides of one triangle are congruent to three sides of another triangle, then the triangles are congruent.)
 B SAS (If two sides and the included angle of one triangle are congruent to two sides and the included angle of another triangle, then the triangles are congruent.)
 C ASA (If two angles and the included side of one triangle are congruent to two angles and the included side of another triangle, then the triangles are congruent.)
 D AAS (If two angles and a side of one triangle are congruent to two angles and a side of another triangle, then the triangles are congruent).

AMI Day 9: Geometry

- 30** A scientist has two similar cylindrical beakers. Beaker A has radius 6 centimeters. Beaker B has radius 3 centimeters. Which answer correctly completes the statement?

The volume of Beaker A is _____ times the volume of Beaker B.

- 22** Find the surface area of the composite figure below.

- 19** The map below shows where four of Nahimana's friends live.

- 23** The figure below is a net of a rectangular prism with a length of 14 yards, a width of 12 yards, and a height of 4 yards.

Which friend lives at the point $(-4, 2)$?

- 24** What is the volume of the cylinder shown below?

- 18.** Which picture below is an obtuse isosceles triangle?

18

The perimeter of a rectangle is 28 in. If its length is 9 in., find its area.

19

A boy is mowing a rectangular lawn 40 ft. long and 30 ft. wide. He has cut all of it except for a rectangle that is 20 ft. long and 15 ft. wide. What fractional part of the lawn remains uncut?

- A) $\frac{1}{4}$ B) $\frac{9}{40}$ C) $\frac{7}{240}$ D) $\frac{1}{2}$ E) NOTA

20 What three-dimensional figure can be made from the net shown?

- F Triangular pyramid
G Cube
H Rectangular pyramid
J Rectangular prism

21

In the diagram at the right, $m\angle BCE$ is 144° . Find $m\angle ECD$.

22

Give the most specific name for the polygon with vertices $(5, -2)$, $(4, 2)$, $(0, 3)$, and $(1, -1)$

- A) parallelogram B) rectangle
C) square D) rhombus
E) quadrilateral

23

Find the value of y .

- A) 50 B) 55 C) 40 D) $\frac{200}{3}$ E) 45

AMI Day 10: Geometry

38. Find the value of x .

39. Find the value of x .

43. Which of these are a pair of same-side interior angles?

- A) 7, 3 B) 2, 3 C) 1, 3 D) 5, 3

22. In the figure to the right, the circle is centered at the origin and passes through point $P(0, -3)$. Which of the following points does it also pass through?

- A) $(3, 3)$ B) $(-2\sqrt{2}, -1)$ C) $(2, 6)$
 D) $(1.5, 1.3)$ E) $(-3, 4)$

24. Find the geometric mean between 8 and $\frac{1}{4}$

- A) $\sqrt{2}$ B) $\frac{1}{2}$ C) $\frac{\sqrt{2}}{2}$ D) 2 E) 16

For problems 48-50:

Fill-in the blanks for a two-column proof of the theorem:

The two acute angles of a right triangle are complementary.

Given: In $\triangle ABC$, $\angle B$ is a right angle

Prove: $\angle A$ and $\angle C$ are complementary

Statements:

1. In $\triangle ABC$, $\angle B$ is a right angle.
2. $m\angle B = 90^\circ$
3. $m\angle A + m\angle B + m\angle C = 180^\circ$
4. $m\angle A + 90^\circ + m\angle C = 180^\circ$
5. $m\angle A + m\angle C = 90^\circ$
6. $\angle A$ and $\angle C$ are complementary

Reasons:

1. Given
2. #48
3. #49
4. Substitution (steps 2 & 3)
5. Subtraction Property
6. #50

48. Choose from:

- A) Triangle Sum Theorem
- B) Definition of a right angle
- C) Definition of congruent angles
- D) Linear Pair Theorem
- E) Definition of complementary angles

49. Choose from:

- A) Triangle Sum Theorem
- B) Definition of a right angle
- C) Definition of congruent angles
- D) Linear Pair Theorem
- E) Definition of complementary angles

50. Choose from:

- A) Triangle Sum Theorem
- B) Definition of a right angle
- C) Definition of congruent angles
- D) Linear Pair Theorem
- E) Definition of complementary angles

AMI Day 11: Geometry

Pairs of Angles **Adjacent angles** are two angles that lie in the same plane and have a common vertex and a common side, but no common interior points. A pair of adjacent angles with noncommon sides that are opposite rays is called a **linear pair**. **Vertical angles** are two nonadjacent angles formed by two intersecting lines.

Example Name an angle or angle pair that satisfies each condition.

a. two vertical angles

$\angle EFI$ and $\angle GFH$ are nonadjacent angles formed by two intersecting lines. They are vertical angles.

b. two adjacent angles

$\angle ABD$ and $\angle DBE$ have a common vertex and a common side but no common interior points. They are adjacent angles.

c. two supplementary angles

$\angle EFG$ and $\angle GFH$ form a linear pair. The angles are supplementary.

d. two complementary angles

$m\angle CBD + m\angle DBE = 90$. These angles are complementary.

Exercises

Name an angle or angle pair that satisfies each condition.

- two adjacent angles
- two acute vertical angles
- two supplementary adjacent angles
- an angle supplementary to $\angle RTS$

For Exercises 5–7, use the figure at the right.

- Identify two obtuse vertical angles.
- Identify two acute adjacent angles.
- Identify an angle supplementary to $\angle TNU$.

- Find the measures of two complementary angles if the difference in their measures is 18.

AMI Day 12: Geometry

Perimeter and Area of Irregular Shapes

Two formulas that are used frequently in mathematics are perimeter and area of a rectangle.

Perimeter: $P = 2\ell + 2w$

Area: $A = \ell w$, where ℓ is the length and w is the width

However, many figures are combinations of two or more rectangles creating **irregular shapes**. To find the area of an irregular shape, it helps to separate the shape into rectangles, calculate the formula for each rectangle, then find the sum of the areas.

Example Find the area of the figure at the right.

Separate the figure into two rectangles.

$$A = \ell w$$

$$A_1 = 9 \cdot 2 \quad A_2 = 3 \cdot 3$$

$$= 18 \quad = 9$$

$$18 + 9 = 27$$

The area of the irregular shape is 27 m^2 .

Exercises

Find the area of each irregular shape.

For Exercises 5–8, find the perimeter of the figures in Exercises 1–4.

5. _____ 6. _____ 7. _____ 8. _____

9. Describe the steps you used to find the perimeter in Exercise 1.

AMI Day 13: Geometry

Angle Relationships

For Exercises 1–6, use the figure at the right. Name an angle or angle pair that satisfies each condition.

1. Name two acute vertical angles.
2. Name two obtuse vertical angles.
3. Name a linear pair.
4. Name two acute adjacent angles.
5. Name an angle complementary to $\angle EKH$.
6. Name an angle supplementary to $\angle FKG$.
7. Find the measures of an angle and its complement if one angle measures 24 degrees more than the other.
8. The measure of the supplement of an angle is 36 less than the measure of the angle. Find the measures of the angles.

ALGEBRA For Exercises 9–10, use the figure at the right.

9. If $m\angle RTS = 8x + 18$, find the value of x so that $\overrightarrow{TR} \perp \overrightarrow{TS}$.
10. If $m\angle PTQ = 3y - 10$ and $m\angle QTR = y$, find the value of y so that $\angle PTR$ is a right angle.

Determine whether each statement can be assumed from the figure. Explain.

11. $\angle WZU$ is a right angle.
12. $\angle YZU$ and $\angle UZV$ are supplementary.
13. $\angle VZU$ is adjacent to $\angle YZX$.

AMI Day 14: Geometry

Angle Relationships

1. **LETTERS** A sign painter is painting a large "X". What are the measures of angles 1, 2, and 3?

2. **PAPER** Matthew cuts a straight line segment through a rectangular sheet of paper. His cut goes right through a corner. How are the two angles formed at that corner related?

3. **PIZZA** Ralph has sliced a pizza using straight line cuts through the center of the pizza. The slices are not exactly the same size. Ralph notices that two adjacent slices are complementary. If one of the slices has a measure of $2x^\circ$, and the other a measure of $3x^\circ$, what is the measure of each angle?

4. **GLASS** Carlo dropped a piece of stained glass and the glass shattered. He picked up the piece shown on the left.

He wanted to find the piece that was adjoining on the right. What should the measurement of the angle marked with a question mark be? How is that angle related to the angle marked 106° ?

5. **LAYOUTS** A rectangular plaza has a walking path along its perimeter in addition to two paths that cut across the plaza as shown in the figure.

- Find the measure of $\angle 1$.
- Find the measure of $\angle 4$.
- Name a pair of vertical angles in the figure. What is the measure of $\angle 2$?

AMI Day 15: Geometry

Two-Dimensional Figures

Name each polygon by its number of sides and then classify it as *convex* or *concave* and *regular* or *irregular*.

Find the perimeter or circumference of each figure. Round to the nearest tenth.

Find the area of each figure. Round to the nearest tenth.

COORDINATE GEOMETRY Graph each figure with the given vertices and identify the figure. Find the perimeter and area of the figure.

10. $A(3, 5), B(3, 1), C(0, 1)$

11. $Q(-3, 2), R(1, 2), S(1, -4), T(-3, -4)$

12. $G(-4, 1), H(4, 1), I(0, -2)$

13. $K(-4, -2), L(-1, 2), M(8, 2), N(5, -2)$

1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often the most difficult step because it requires the individual to be aware of the situation and to recognize that it is a problem that needs to be solved.

2. The second step is to define the problem. This involves identifying the specific aspects of the problem that need to be addressed and determining the goals that need to be achieved.

3. The third step is to generate possible solutions. This involves brainstorming and considering various options that could be used to solve the problem.

4. The fourth step is to evaluate the possible solutions. This involves comparing the different options and determining which one is the most feasible and effective.

5. The fifth step is to implement the chosen solution. This involves putting the solution into action and monitoring the progress to ensure that the problem is being solved.

6. The sixth step is to evaluate the results. This involves assessing the effectiveness of the solution and determining whether the problem has been solved.

7. The seventh step is to reflect on the process. This involves thinking about what was learned from the experience and how it can be applied to future problems.

8. The eighth step is to communicate the results. This involves sharing the findings with others and providing feedback on the process.

9. The ninth step is to document the process. This involves keeping a record of the steps taken and the results achieved.

10. The tenth step is to review the process. This involves looking back at the entire process and identifying areas for improvement.

11. The eleventh step is to apply the lessons learned. This involves using the insights gained from the process to solve other problems.

12. The twelfth step is to continue to learn. This involves staying up-to-date on the latest research and techniques in the field.

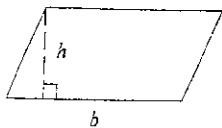

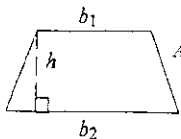

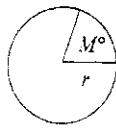

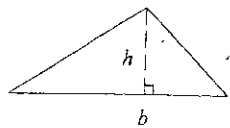

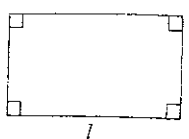

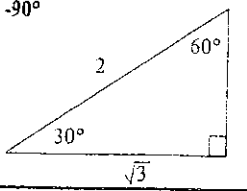

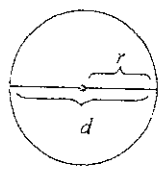

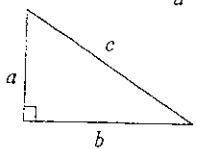

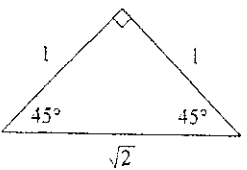

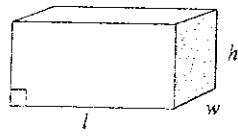

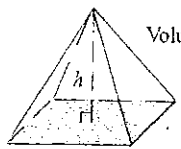

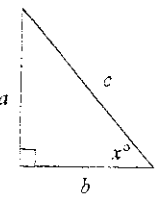

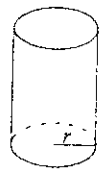

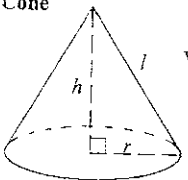

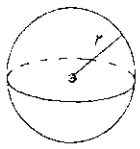

13. The thirteenth step is to share the knowledge. This involves teaching others and contributing to the field.

14. The fourteenth step is to stay motivated. This involves finding ways to stay interested and engaged in the work.

15. The fifteenth step is to be persistent. This involves not giving up and continuing to work on the problem until it is solved.
